NEW ENGLAND DEACONESS HOSPITAL

Distribution of the Expense Dollar for 1935

(Salaries included in individual expense portions)

AN URGENT NEED

“Nowhere in the country have I witnessed so much fine surgery, but nowhere have I seen surgeons working under such handicaps.”

A prominent surgeon made this statement the other day while visiting the New England Deaconess Hospital.

The handicaps to which he refers constantly face those who try to run from fifteen to twenty major operations a day — many of them from two to five hours long — in three wholly inadequate operating rooms.

These quarters were the last word in scientific surgical equipment fifteen years ago; today they are out-dated and insufficient for the character and amount of surgery being carried on here.

Architects are now studying the problem and money must be raised to provide this new operating suite.

What a fine opportunity this offers to some person or persons who are interested to serve needy humanity and at the same time provide a lasting memorial to a loved one!

REV. GEORGE H. SPENCER, D.D.

REPORT OF THE SUPERINTENDENT

TO THE ANNUAL MEETING OF THE CORPORATION

IN reporting the year's work and noting down the things accomplished, it is impossible to reveal the real importance of the work of this hospital. If you could read the letters and hear the expressions of gratitude from patients whose bodies have been healed, whose minds have been set at rest, whose families have been kept together, whose spirits have been uplifted, whose hope has been revived, you would get at least some evaluation of the work of the hospital. Professor Paul Elmer More has declared that the great contribution of Christianity and Christian institutions has not been, as popularly supposed, the gift of love, but the gift of hope. Such a statement is open to debate for the two gifts are so interrelated, especially in a hospital, but hope is the end result.

Through all its services and agencies, its restoration and rehabilitation, it gives release to the burdened spirit so that hope springs again and life begins anew. Such a contribution is priceless. The Social Service report has given you a glimpse of this work.

A YEAR OF ACCOMPLISHMENT

In many respects the past year has been the best the hospital has known. We have had the largest census in our history. We have cared for more desperately sick people than ever before. Many times we have taxed the capacity of the hospital and turned patients away. During the first eleven months we equalled the census of twelve months last year. While we have not done quite as much free work in dollars, we have helped more people in actual distress.

We have accomplished many things which we set out to do. In my report last year, I noted the fact that our X-ray equipment at the Deaconess building was almost entirely out-dated and that the X-ray equipment at Palmer was not at all sufficient for our needs. I spoke of the need of new sterilizing apparatus at Palmer; of furnishing and opening the third floor of Baker; of changing over our motors from DC to AC current; of paving Deaconess Road; of changing our heating system from gravity to a vacuum system.

These things have all been accomplished during the year with the exception of the change in motors, which has been partly accomplished, and our X-ray needs have been amply supplied by a gift of

AN AVERAGE OF 63,000 MEALS MONTHLY ARE SERVED TO HOSPITAL PATIENTS, NURSES AND HELP.
MORE THAN 9,913 OF THESE ARE PREPARED IN THE PALMER MEMORIAL KITCHEN

\$28,000 from good friends of the hospital, who gave us our radium and who regularly support our cancer work. In addition, we have added a new battery of stoves in the Deaconess kitchen, new food trucks in Palmer, changed over the public dining room to Harris Hall, giving us much needed room in the Deaconess kitchen; completed the Pharmacy Store changes, and built an office for the social service department. These improvements entail an expenditure of approximately \$45,000.00.

DIFFICULTY OF INCREASING COSTS

One thing we have had to combat this year has been the sharp rise in the price of foodstuffs, as well as some rise in all supplies. Raw food has cost us \$25,000.00 more than last year. The serious thing about this increase is that there is no corresponding income to offset it. Hotels have met the rise in food prices by increasing their unit rates but the hospitals of Boston have all felt that the majority of the people who were seeking hospital accommodations could not afford higher rates than now exist.

In addition to the increase in costs, there is always the fact that the character of our work has increased our expenses materially. The number of surgical patients in the hospital has increased and the type of surgery; cancer, brain surgery, chest surgery, for example, is such that requires more expensive care and supervision. Only our increased volume of work has saved the situation.

In spite of this, as the Treasurer has shown, we have met all current bills, including \$46,179.00 interest, and made a net gain of \$32,405.00, which we have paid on indebtedness.

The budget for 1936 has been carefully drawn. There are no increases over the present year's expenses except for the anticipated expense of running the third floor of Baker and a few items of necessity.

COMMUNITY FUND COÖPERATION

As usual, we are taking our responsibility in the Community Fund Campaign. Our employees are contributing their quota and we are sending out more than a hundred solicitors. In reports which we make to the campaign headquarters, we are required to give the complete picture of our resources and expenses as well as of the residence of our patients. More than half of our patients come from outside Metropolitan Boston. During the year we have, as usual, had patients from all parts of this country, Canada, West Indies, and Central America. Visiting doctors have come from every state in the Union, England, Japan, China, Australia, and other parts of the world. This means that our fame is widespread.

NEED OF NEW OPERATING SUITE

Each year some large project demands attention. The Baker building, the new boiler plant, elevators, X-ray, have all come along through succeeding years. Now we face the need of a new operating suite at the Deaconess building. This will cost \$50,000.00 or \$60,000.00. Where the money is to come from I cannot say, but I am sure it will come, just as money has come for these other projects. I trust and believe that before the next Annual Meeting, this need will be met. It must be met.

MISS McVICKER RESIGNS

Miss Mabel McVicker, for seven years Superintendent of Nurses and Principal of the Training School of the Deaconess Hospital, has resigned from this position. Miss McVicker was a woman of strong character and the highest ideals. She commanded the respect of all who knew her. Under her leadership our Training School went steadily forward until today it ranks with the best. We shall all miss her, but the nurses, whose staunch friend she always was, will miss her more than anyone else. It will take time and great care to replace her with someone who will insure the highest educational standards for our school and at the same time give us the type of bedside nursing which our peculiar services demand.

With sincere gratitude for the coöperation and help of all those with whom I have labored through the year, I submit this my seventh report to the corporation.

WARREN F. COOK,
Superintendent.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

The Social Service Department has now been functioning two and one half years, a long enough period to have demonstrated its usefulness to the institution.

In an attempt to answer the frequent query, "Just what do you do in the hospital?", I would stress the fact that the job of the medical social worker is to supplement the efforts of the doctor in the interests of healthy living for the patient. The worker is able to bring to the doctor a picture of the patient's home, family, work, worries, and his ability or inability to carry out orders for treatment. In many cases she is able to enhance the value of a short hospital stay by her aid in carrying out effective treatment at home or in another institution.

In the Palmer cancer and tumor clinics, as a routine procedure, the social worker sees all new patients. They are, almost without exception, fearful that their symptoms are malignant. The majority have the additional anxiety of finances. It is a joy to see the relief that a patient will show when his economic problem is understood and a definite arrangement made for hospital expense; when a plan is worked out with a mother for the care of her home and children; or when the father is reassured that his employer will be interviewed so that his job will not be lost.

One mother, age forty, with a far advanced cancer entered the hospital for a three weeks' period. Her husband had died of tuberculosis several years before, leaving her with six children now ranging in age from five to eighteen. The social worker kept in constant touch with the children during the mother's hospital stay, arranging with a neighbor to give the younger ones some oversight, and advising and encouraging the oldest boy in his efforts to manage the home. A red letter day for the mother was the visit from all the children when a special party for the family was arranged on the Palmer roof. The patient is home now, failing slowly and under the care of the city doctor and visiting nurse. She refuses further hospital care wishing to be with her children as long as possible. The oldest son, to show his appreciation of the kindness extended the family, insisted on coming into the hospital to work without reimbursement for sixty hours.

A woman facing permanent blindness found comfort in the knowledge that the hospital worker was contacting the Department of the Blind and had their assurance that a teacher of Braille and handwork would begin her instructions as soon as she reached home and the doctor approved commencing.

The department has been especially active with a number of children on the diabetic service. John, a severe diabetic, additionally handicapped by being undersized, simply did not respond to treatment at home. His cultured, educated parents were in a state of nervous exhaustion and despair due to a complete reversal of their economic state from affluence to near dependency. The boy's plans for college were shattered. The doctor referred the case to the social worker at this point for a possible solution. A conference with a close family friend resulted in his raising among other friends a sufficient sum of money to finance the tuition in a special school, for whose work the patient showed exceptional aptitude, and for paying his board in a local convalescent home where he is under the constant care of a nurse. The new plan has been functioning for two months now and we are all gratified at the all around improvement as shown by the reports from the doctor and the school principal. Our patient stands at the head of his class and he is reasonably certain of obtaining a remunerative job at the end of a year's training.

For a girl in this group, we were able to raise funds to provide new dentures and a month at Prendergast Preventorium. A small deaf and dumb child was admitted to a special boarding school only after careful interpretation by the social worker of her medical problem, diabetes, which had made the school authorities apprehensive. Definite social work has been done on 28 diabetic children and has included making possible camp or convalescent care, schooling, insulin, dentures, transportation, and especially interpretation to relatives.

As the Deaconess becomes increasingly well known for its work in brain and chest surgery and for thyroid difficulties, as well as the diabetic and cancer work, the requests for admission to the hospital become more numerous. Many of the applicants are very poor or have only marginal incomes, obviously unable to pay for medical care. An intensive effort has been made by Social Service to interest the local community in its sick poor with gratifying results. No patient has been refused admission here who needed our specialized care, and local public and private funds have been raised to meet part of the expense of 76 Palmer patients and 66 Deaconess patients to the amount of \$9,061.62 from 48 communities in New York and the 6 New England states. In 9 cases, relatives have given 638 hours of work in the laundry or housekeeping department as partial compensation for the care of their sick.

A relief fund of \$1,075.16 has been raised for the benefit of 54 patients and used for tuition, an artificial arm, two artificial legs, a back brace, scales, glasses, insulin, diabetic supplies, dentures, dressings, convalescent or nursing home care, transportation, board and room of relatives in order that they may be near the hospital in emergencies, clothing, rent and food. Thanksgiving and Christmas treats in the families of 14 patients were arranged.

During the year 121 old cases were active and 966 new patients were referred to Social Service. Of this number 429 were Deaconess patients, 422 Palmer, 5 Baker and 110 non-hospital cases. Several hundred additional patients were interviewed routinely but are not included in the above figures because the initial interview disclosed no reason for further activity on the part of the social worker. Of the 966 patients, the staff referred 325, the out-patient department 120, the administration 216, and the remainder were referred by local doctors, outside agencies, hospitals, clinics, and relatives. A total of 374 visits outside the hospital were made in behalf of 220 patients.

The department has been fortunate in having the services of Mrs. Esther Rosenow as a full time worker. She is particularly well suited to hospital social service work and has done an exceptionally good job in developing the work at the Deaconess. Miss Elma Jones, department secretary, resigned in July in order to attend Simmons' School of Social Work. We hope to have her return in a social work capacity when she completes her training. Her place has been most satisfactorily filled by Miss Winifred Ratcliffe. Miss Arva Bishop has given one-half time to stenographic duties in the Deaconess office. In addition to the regular personnel, the department has had the services of 4 volunteers who have assisted with clerical work, home visiting, acted as escorts, and have made themselves generally useful.

Respectfully submitted,

GERTRUDE S. JAMESON,
Director of Social Service.

THE DENTAL ROOM AT BAKER. EVERY DIABETIC PATIENT MUST HAVE HIS TEETH THOROUGHLY EXAMINED AND CARED FOR BEFORE LEAVING THE HOSPITAL

THE TRAVELING LENDING LIBRARY

Since our Lending Library started on its journey thirteen and one-half months ago, it has travelled far. In that period of time 10,736 visits have been made to patients and our books have circulated 6,337 times. When one considers the capacity of the hospital, 278 beds, these figures are impressive. A total of 647 books have been added, by donation 458 and 189 by purchase, at a total cost of \$60.01.

Until June first the work was carried on by two Simmons College Library School students working on an ERA project. When this help was no longer available at the close of the school year, Miss Doris Bean was engaged on a two day a week basis to continue the work. Since October 1935, she has had the assistance of two Simmons College students on a student aid project each averaging about ten hours a week. A Radcliffe senior has given one afternoon a week and we have had regular continuous volunteer service from Miss Gretchen March three mornings a week. Four other volunteers have given service at sometime or other during the year.

Mrs. S. T. Bittenbender, representing the Friends of the Deaconess, has shown her interest in a very practical manner by securing donations and presenting the work to the group of interested Friends.

Practically all our gifts have been usable books in good condition, good print, and of a light enough character to appeal to the average patient. Many have come from patients in appreciation of the library service while here, from hospital employees, nurses, members of the administration and the staff, as well as from outside individuals. The Lend-A-Hand Society has contributed a collection of foreign books, Jewish, French, Italian, and Finnish. We have found that the type of book most in demand is light fiction of a romantic or adventurous nature, humor, mystery, westerns, and biographies of a contemporary character.

In November 1935, a rental collection was started in response to the demand of a group of our well-read educated professional patients, doctors, ministers, teachers, students, etc. The newly published best-sellers were purchased, covered attractively with cellophane and daily visits with this collection started. The fee is 5 cents a day, payable 10 cents in advance. The response was instant and enthusiastic. In the first five weeks, \$29.00 was collected. With this money the rental collection can be augmented frequently and the older books relegated to the free collection which still makes semi-weekly visits throughout the hospital.

Another type of special collection has been established for the benefit of the tubercular patients who are in the hospital for short periods for operation and are confined to two wards. A special shelf was constructed and about 25 books, largely duplicate copies started for identification, have been placed there permanently. We need contributions of current magazines for these wards.

Miss Kathleen Jones, of the State Department of Libraries, and Miss June R. Donnelly, Director of the Simmons' Library School, have been interested in our project and helpful in advising us as to purchase of books and method of work.

Our Traveling Library is not a superfluous extra, not just a "nice thing to do." This service in a hospital is becoming more and more important and in the institutions where it is well established and well organized, it is regarded as a necessity to the well-being of the patient, a service of therapeutic and recreational value.

Respectfully submitted,

GERTRUDE S. JAMESON,
Social Service Department.

PATIENTS, FORMER PATIENTS, THEIR RELATIVES AND FRIENDS ATTEND THE LECTURES GIVEN DAILY AT
THE BAKER CLINIC

REPORT OF THE MEDICAL STAFF

The greater severity of illness of the patients coming to the hospital has added materially to the work of the Staff during the past year. As various special services have been developed in the care of patients with malignant disease, with metabolic diseases, with brain tumors, with diseases of the chest requiring surgical treatment, there has been an increasingly heavy load thrown on all involved in the care of the patient. A particularly important feature of the work at this hospital is that many of the cases sent for care here have been referred for specialized treatment and so present an unusually difficult problem from the standpoint of both diagnosis and therapy.

The various units of the hospital have carried out their work in such fashion as to round out well the facilities offered for the care of patients.

The educational work mentioned in the report last year has been continued and has been expanded. A second graduate interne has been added to the Palmer Memorial Hospital, a research Fellow in the pathology of diabetes has been added, the graduate instruction made available by the Lahey Clinic has been continued, and hospitality has been offered a considerable number of visitors, both surgical and medical, interested in studying the procedures carried out here.

The new library, smoothly functioning, has been a valuable feature for Staff and internes alike. It is with regret that I record the resignation of Miss Holt, the librarian, who has carried on the work from the start and until her increasing duties at the Harvard Medical School library made it impossible for her to continue. Her place has been taken by Miss Strong of the staff of the Harvard Medical School library.

With deep regret I record the death of Dr. Harry W. Goodall, for many years a member of this Staff. His keen clinical insight, pleasant personality and willingness to place his knowledge at the disposal of all in need of it will long be missed.

Dr. Richard Dresser has become Consulting Radiologist rather than Radiologist at the Palmer Memorial Unit in order that he may devote more time to his increasing responsibilities at the Collis P. Huntington Memorial Hospital. His place has been taken by Dr. Jack Spencer.

Dr. Channing S. Swan resigned from the Staff of the Deaconess General Unit owing to the concentration of his work elsewhere.

Four members of the Staff who have had no occasion to make use of

the hospital beds during the past year have been dropped to make room for those more actively utilizing the facilities of the hospital.

A number of welcome additions have been made to the Staff:

NEW ENGLAND DEACONESS HOSPITAL

BREWSTER, ALBERT H.	Orthopedist
CASS, JOHN W.	Physician
STETSON, RICHARD P.	Physician
MARSHALL, SAMUEL F.	Surgeon

PALMER MEMORIAL HOSPITAL

MINTZ, ROSS	Assistant Surgeon
-------------	-------------------

By unanimous vote of the Staff, Dr. Frank H. Lahey was elected Surgeon-in-Chief of the New England Deaconess Unit, and Dr. F. Gorham Brigham Physician-in-Chief.

A most important development at the Palmer Memorial Unit has been initiated by the gift of interested friends which has made possible the acquisition of a 400,000 volt X-ray therapy apparatus. The details of the equipment were settled after prolonged study, and it is felt that the unit now under construction will give us the most satisfactory unit for deep X-ray therapy treatment of malignant disease in this section of the country. As a most useful by-product of this, a complete revision and modernization of the diagnostic X-ray plant at the New England Deaconess Unit is also being carried out. It is anticipated that approximately ninety days will be needed for establishment of these units in operation.

Respectfully submitted,

SHIELDS WARREN,
Chairman of the Staff.

REPORT OF THE PATHOLOGIST

The volume of work in the laboratories has continued at the high level set in 1934 with only a very slight drop. While the actual number of tests performed has decreased, though less than one per cent, the actual work of the laboratories has increased owing to the complexity of much of the work performed and a considerable increase in the more intricate procedures. Fortunately the laboratories have continued to pay for themselves and for the space they occupy during the year, as well as returning a slight profit to the hospital to be applied against other departments which by their nature must operate at a loss.

CHEMICAL LABORATORY

The new laboratory of the George F. Baker Clinic has functioned satisfactorily. Thanks to the energy and skill of Miss Hazel M. Hunt the two laboratories have been conducted as efficiently as the single laboratory had been in the past.

The total number of tests performed in the Chemical Laboratory for the year number 104,287. Of this, 74,366 were performed in the laboratory of the New England Deaconess Unit and the balance in the laboratories at the George F. Baker Clinic and the Palmer Memorial Unit. Seventeen per cent of the volume of the year's work came from the George F. Baker Clinic.

LABORATORY OF PATHOLOGY

The laboratory continues to carry on the pathological work of the New England Baptist Hospital, as well as of this hospital. A certain amount of pathological work, largely of consulting nature, is done for laboratories of other hospitals.

Dr. Paul N. Harris has continued as Assistant Pathologist. Dr. Robert Fienberg, Resident in Pathology, resigned to become Resident in Pathology at the Pondville State Hospital for Cancer July 1, 1935. Dr. Joseph E. Porter was promoted from Interne in Pathology to Resident in Pathology effective July 1, 1935. Dr. Geoffrey P. Keane was appointed Interne in Pathology July 1, 1935. Dr. J. R. E. Morgan, Littauer Fellow in Pathology, completed his work September 1, 1935 and his place has been taken by Dr. John Ungar. Dr. Ungar's work continues in the field of malignant disease with particular reference to the effect of radiation therapy on the skin.

A valuable experiment was carried out during the year by the establishment of the Pathological Fellowship in Diabetes, financed

jointly by the Proctor Fund of the Harvard Medical School and interested friends of the hospital. This has enabled intensive studies in the pathology of diabetes to be carried out and a free postmortem service offered to physicians who have patients dying of diabetes. Owing to the great advances made in the therapy of diabetes in the past decade, it is increasingly important to analyze the unsuccessfully treated cases and see whereby still further advances may be carried out.

A certain amount of research, particularly in relation to metastases of cancer, has been done with funds obtained from outside sources.

No investigative work has been financed by the hospital. As the financial condition of the hospital improves, I hope that the Trustees will give sympathetic consideration to the many faithful employees who have worked willingly and efficiently at salaries reduced from a level none too adequate initially. Once this problem has been met, the numerous opportunities for research are too impelling to be further neglected and intensive cultivation of our research opportunities should be begun.

Respectfully submitted,

SHIELDS WARREN,
Pathologist.

REPORT OF THE SCHOOL OF NURSING

The ultimate aim in all educational institutions should be teaching the mind to act with vigor and economy. The essential aims of nursing education at present are teaching the nurse what a sick human being is, that the patient is a sick human being and how to behave toward a sick human being. These may be considered the practical and tangible aims of the New England Deaconess Hospital School of Nursing. But there is another more intangible aim necessary to any project, educational or otherwise. The Deaconess motto, written in Kaiserswerth, Germany in 1836 by Frederica Fleidner, one of the founders of the first Deaconess Hospital is "The spirit of service must never be sacrificed to the technique." This motto expresses simply the spiritual aim of the School of Nursing and to this end the Deaconess Hospital steadily moves.

Certain changes have occurred during the year of 1935. Mrs. Mildred P. Damon, class of 1922, First Assistant Superintendent of Nurses and Assistant Principal of the School, resigned April 30 after a faithful service of ten years. Miss Bertha E. Johnston, 1932, was appointed to fill this position. Miss Mary Plastridge, Head Nurse of Floor IV, Deaconess, resigned February 15. Miss Jean Lauder, Peter Bent Brigham, 1933, is now filling this vacancy. Miss Dorothy Wentworth, 1927, Head Nurse on Floor III, Deaconess, resigned October 31. Miss Elizabeth Curtis, 1931, assistant night supervisor is now in this position. Miss Mildred Llewellyn, Exeter Hospital, 1932, Exeter, New Hampshire, became Assistant Night Supervisor in July.

Upon the opening of the Foot Room at the George F. Baker Clinic on July 1, Miss Mary Crawford, 1931, was added to the nursing staff. There are now two graduate nurses employed to give special care to the feet of diabetic patients.

Miss Lucy J. Ramsdell, 1923, was appointed in August to fill the office of second assistant to the Superintendent of Nurses and second assistant to the Principal of the School. This position had been made vacant in April by the resignation of Miss H. Esther Ramsdell, 1926.

Miss Mabel McVicker, Superintendent of Nurses of this school since 1928, was granted a leave of absence of six weeks to attend the summer session at Columbia University.

During the year 54 students have been admitted to the school; 18 have withdrawn. The total number of days lost through illness and absence due to illness was 1,365. Seven post-graduate students have availed themselves of the course of eight weeks in diabetic

nursing. The course was established in 1932. The following places have been represented this year: Maine 1, Australia 1, Alabama 1, New Jersey 1, Massachusetts 1, Ohio 2. One graduate nurse from Alabama obtained operating room experience here in the summer.

The affiliation of this school with the Medical Mission, Hull Street, Boston was discontinued December 31, 1935.

The school has an affiliation of three months with the Boston Lying-In Hospital, Boston, for obstetrics and one of three months with the Children's Hospital, Boston, for pediatrics. There are also two elective affiliations, one at the Psychopathic Hospital, Boston, of three months and one at the Eye and Ear Infirmary, Boston, of two months.

The bound copies of the American Journal of Nursing have proved very helpful in teaching and are a necessary addition to the reference library. This library is growing gradually but a well equipped reference library is one of the most vital needs of this school.

This year ended with the following enrollment of graduate and student nurses:

NEW ENGLAND DEACONESS HOSPITAL

Superintendent of Nurses and Principal of School of Nursing	1
Assistant Superintendents of Nurses	2
Instructors	2
Supervisors	6
Night Supervisors	2
Head Nurses	8
Student Nurses	112
Affiliates	3
Preliminary Students	36
Post-graduate Students	1
Graduate General Duty Nurses	17
	190

PALMER MEMORIAL UNIT

Supervisor of Nurses and Attendants	1
Assistant Supervisor of Nurses and Attendants	1
Graduate Assistant Out-patient and Radium Supervisor	1
Operating Room Supervisor	1
Night Supervisors	2
Head Nurses	4
Graduate General Duty Nurses	6
Student Nurses (included in above)	11
Supervisory Attendant	1
Attendants	18

The George F. Baker Clinic has been barely mentioned in this report. However, elsewhere in the book there is a full report. As the nursing service consists wholly of graduate nurses, the school is not concerned, at least from the student nurse point of view. However, this unit is significant from the school outlook in that this specialized service offers opportunities to the graduate nurse interested in diabetes. Very few schools of nursing have the specialized services that the Deaconess can offer through the Deaconess General, the Palmer Memorial Hospital and the George F. Baker Clinic.

The graduation exercises were held at St. Mark's Methodist Episcopal Church, Brookline, on May 21. Miss Carrie M. Hall, Superintendent of Nurses and Principal of the School of Nursing at the Peter Bent Brigham Hospital, Boston, gave the graduation address. The program was further enhanced with selections by the school glee club. The class numbered forty and as in former years the occasion was beautiful and impressive.

In looking towards the future, there are a few definite trends in nursing education the school should note. Increasingly and constantly, the nurse of the future must exemplify health and teach it. The public health viewpoint of schools of nursing will broaden due to the increasing demands of the community. With this enlarging of the public health outlook it logically follows that the nurse of today and of the future will become more and more a self-respecting socially minded citizen. To attain this result schools of nursing will inculcate in their program recreational activities of a wide scope and in their curricula an increasing emphasis will be put upon public health and its implications.

Respectfully submitted,

L. HELEN ESTEY, R.N.,
Acting Principal of the School of Nursing.

ANNUITIES

The New England Deaconess Hospital is organized and chartered to receive capital sums of money on an annuity basis on account of which they will pay to the donor an annual annuity (payable quarterly) during the life of the annuitant. The interest rate is necessarily based upon the age of the annuitant but is somewhat higher than the usual safe investment rate. The payment of these annuities is fully guaranteed by reserve funds. No annuitant of this hospital has ever failed to receive his interest check promptly. In these days of falling interest rates and great losses, our annuitants have felt this was their best asset.

What better investment could be made than one of this type by which the donor sees his money placed where he wishes it while still alive and also receives a safe, regular income? For details address the superintendent of the hospital, Warren F. Cook, 16 Deaconess Road, Boston, Massachusetts.

Please send me further information regarding
Deaconess Hospital Annuities.

clear.)

FOR.....

(Here may be indicated the general work of the
hospital, or any specific line of work which the
hospital undertakes.)

Signed.....

Address.....

Make all checks payable to the NEW ENGLAND
DEACONESS HOSPITAL, Boston, Massachusetts

THE motive behind the growth of the Deaconess Hospital has been the instinct and desire to care for those sufferers who are not able to care for themselves. The need is greater today than it has ever been. Why not let skilled workers be the servants of your good will?

NEW ENGLAND DEACONESS HOSPITAL

FRANCIS W. CAPPER, *Treasurer*

16 Deaconess Road, Boston
